PROPOSED SOLUTION

Hack for Social Cause

CORE PROBLEM

- Survivors of domestic abuse may face device monitoring, limited privacy and fear of retaliation.
- Conventional help-seeking methods may expose sensitive information.
- Finding appropriate local support can be difficult.
- Sending a request does not guarantee that support has received it.

PROPOSED SOLUTION — SAATHISIGNAL

A privacy-first digital platform connecting people seeking assistance with verified support organisations through user-controlled contact preferences.

HOW IT WORKS

Select the required support: counselling, shelter information or legal aid.

Choose an approved contact method and safe contact window.

Route the request to a participating support organisation.

Track acknowledgement and referral status.

INNOVATION AND UNIQUENESS

Consent-controlled contact workflow.

Service routing based on language, location area and availability.

Clear offline queue and delivery status.

Privacy-focused access controls and minimal data collection.

Key Differentiator: The system prioritises safe, user-controlled access to support rather than relying solely on a one-tap emergency alert.

Team Name

TECHNICAL APPROACH

Hack for Social Cause

TECHNOLOGIES

- Frontend: React.js
- Backend: Python FastAPI
- Database: PostgreSQL
- Security: Role-based access control, authentication and data minimisation
- AI: Optional multilingual assistance for navigating support categories; no autonomous risk decisions.

IMPLEMENTATION WORKFLOW

User Interface → Consent Validation → Secure Request API → Support-Service Routing → Partner Dashboard → Acknowledgement and Status

Implementation Methodology

1. Develop the support-request interface.
2. Implement consent validation and secure request handling.
3. Build the partner dashboard and routing engine.
4. Test offline states, access controls and contact preferences.
5. Demonstrate the workflow using synthetic data.

AI Tool Usage: AI tools may assist with code generation, interface design and testing. All generated code and outputs will be reviewed and validated by the team.

IMPACT POTENTIAL

TARGET AUDIENCE

- People experiencing domestic abuse or coercive control.
- Women's support organisations and counsellors.
- Legal-aid providers and shelter coordinators.
- Community organisations supporting vulnerable individuals.

EXPECTED BENEFITS

SOCIAL IMPACT

- Reduces barriers to finding appropriate support.
- Promotes user autonomy and informed consent.
- Improves visibility into request acknowledgement and referral progress.

OPERATIONAL BENEFITS

- Streamlines support-service referrals.
- Reduces manual coordination between participating organisations.
- Supports multilingual access and low-bandwidth use.

STAKEHOLDERS

Survivors • NGOs • Counsellors • Legal-Aid Services • Shelter Providers • Community Support Networks

IMPACT MEASUREMENT

- Successful completion of the support-request workflow.
- Time taken for partner acknowledgement.
- Referral completion rate.
- User-reported trust, usability and sense of control.

Team Name

FEASIBILITY AND RISK ANALYSIS

Hack for Social Cause

FEASIBILITY

- Uses established web technologies and a modular architecture.
- A functional MVP can be developed within a hackathon.
- A simulated partner dashboard enables end-to-end demonstration.
- Pilot deployment requires collaboration with qualified support organisations.

KEY RISKS AND MITIGATION

- **Privacy Exposure** → Minimise sensitive data, restrict access and conduct threat modelling.
- **Unsafe Follow**-Up → Enforce explicit contact preferences and approved time windows.
- **Network Failure** → Display queued status until delivery is confirmed.
- **Incorrect Service Routing** → Use verified service directories and validate availability.
- **False Sense of Security** → Clearly communicate limitations; never claim guaranteed safety or emergency response.
- **Unvalidated AI Output** → Keep AI optional, restrict it to navigation assistance and provide human-reviewed information.

RISK MANAGEMENT PRINCIPLE

User safety, consent and privacy take priority over automation and convenience.

Team Name

TEAM

Hack for Social Cause

TEAM COMPOSITION

Team Name: [Registered Team Name]

- Team Leader: Project coordination and integration.
- Frontend Developer: User interface and accessibility.
- Backend Developer:APIs, database and request routing.
- Security and Testing Lead: Privacy controls, testing and validation.
- Research and Impact Lead: Support-service research and impact evaluation.

Edit the roles to match your actual team members.

KEY CHALLENGES

- Designing a discreet yet usable interface.
- Protecting sensitive user information.
- Preventing unsafe or unauthorised follow-up.
- Verifying support-service information.

OUR APPROACH

Build a functional prototype, validate it with synthetic data and seek feedback from qualified support professionals before any real-world deployment.
